The Actia IP is mounted with five screws around the frame of the bezel. On our Adventurer, the IP is mounted in steel and you need to move the plastic dash face just enough to access the screws. Once the screws are out, the IP drops down and the two modular connectors are detached. The IP can then be easily removed.

Wondering if these symptoms are related to actia instrument cluster problems. Cluster was replaced in 2006. (Steve Bachel, 12/23/2017) This sounds to be a voltage issue and not an issue directly with your instrument cluster. Your battery might test good for voltage but still have a bad cell. If you haven't, try starting it using the boost ...
