Google Cached Page. Google Cache is normally referred as the copies of the web pages cached by Google. Google crawls the web and takes snapshots of each page as a backup just in case the current page is not available. These pages then become part of Google's cache. These Google cached pages can be extremely useful if a site is temporary down ...

Google Cached Pages of Any Website - CachedView

Page Caching ¶ Page caching refers to caching the content of a whole page on the server-side. Later when the same page is requested again, its content will be served from the cache instead of regenerating it from scratch. Page caching is supported by yii\filters\PageCache, an action filter. It can be used like the following in a controller class:

Caching: Page Caching | The Definitive Guide to Yii 2.0 ...

Page Cache Lifetime - the option displays a period of time the page cache is valid. When the indicated time period is over the cache will get the status 'invalid'. A first one who visits a page will get the status 'Cache Miss' (all next visitors get 'Cache Hit'). When the value equals 0, the page cache lifetime will be zero.

Guide for Full Page Cache [Amasty Extensions FAQ]

In most browsers, you can overwrite a web page's stored cache without deleting all the cache collected by the browser. In essence, this erases and replenishes the cache for that specific page only. In most browsers and operating systems, you can bypass the cache by holding down the Shift or Ctrl key as you refresh.

How to Clear Internet Cache in Every Major Browser

Caching can be enabled on a per-page basis, and you can set the length of time that a page should remain cached before being refreshed. When a page is loaded for the first time, the file will be cached using the currently configured cache engine. On subsequent page loads, the cache file will be retrieved and sent to the requesting user's browser.

Web Page Caching — CodeIgniter 4.0.4 documentation

What is the Cache-Control Header. Cache-control is an HTTP header used to specify browser caching policies in both client requests and server responses. Policies include how a resource is cached, where it's cached and its maximum age before expiring (i.e., time to live). The cache-control header is broken up into directives, the most common of which are detailed below:

What is Cache-Control and How HTTP Cache Headers Work ...

ttl-in-cache. Forces object(s) to become cached, as if they had a Cache-Control: max-age:<time> header. Can be overruled by requests with cookies. The value is the amount of time object(s) are to be kept in the cache, regardless of Cache-Control response headers from the origin server. Use the same time formats as pin-in-cache.

A cache max-age is a positive integer, expressing a number of seconds. Cache max-ages are passed around as individual integers, because a given cache item can only logically have a single max-age. Examples: 60 means cacheable for 60 seconds; 100 means cacheable for 100 seconds; 0 means cacheable for zero seconds, i.e. not cacheable
