After developing a classification schema for your organization, the next step is to develop the taxonomy and search criteria for finding this data. For personal data, you've already completed this work by identifying sensitive information types and customizing or creating new sensitive information types for your environment.

## **Architect a classification schema for personal data ...**

Employing a proper data classification scheme is cost effective, as it allows a business to focus on protecting its higher risk data assets. For an example, businesses that do not have a data classification system treat all data as highly confidential; however, in reality they often apply the wrong controls to protect the data.

## **Data Classification: Why it is Important for Information ...**

Step #2. Discover the sensitive data you already store. Now it's time to apply your classification policies to your existing data. You could choose to classify only new data, but then business-critical or confidential data you already have might be left insufficiently protected.
