Fundamentals Of Material Science Callister

The material of choice of a given era is often a defining point. Phrases such as Stone Age, Bronze Age, Iron Age, and Steel Age are historic, if arbitrary examples. Originally deriving from the manufacture of ceramics and its putative derivative metallurgy, materials science is one of the oldest forms of engineering and applied science. Modern materials science evolved directly from metallurgy ...

The strain hardening exponent (also called the strain hardening index), usually denoted n , a constant often used in calculations relating to stress-strain behavior in work hardening. It occurs in the formula known as Hollomon's equation (after John Herbert Hollomon Jr.) who originally posited it as $\sigma = K \epsilon^n$ where σ represents the applied true stress on the material, ϵ is the true strain, and n is the ...
