Home » Articles » Misc » Here. Data Pump API for PL/SQL (DBMS_DATAPUMP) The DBMS_DATAPUMP package provides a PL/SQL API, allowing us to define Data Pump operations programmatically. This article provides a few examples to get you started. There were examples of this functionality in the original 10g Data Pump article here, but this article expands on those examples.

ORACLE-BASE - Data Pump API for PL/SQL (DBMS_DATAPUMP)

The Oracle Data Pump clients, expdp and impdp, start the Oracle Data Pump Export utility and Oracle Data Pump Import utility, respectively. The expdp and impdp clients use the procedures provided in the DBMS_DATAPUMP PL/SQL package to execute export and import commands, using the parameters entered at the command line. These parameters enable the exporting and importing of data and metadata for a complete database or for subsets of a database.

Overview of Oracle Data Pump

The Data Pump Import utility provides a mechanism for transferring data objects between Oracle databases. The utility is invoked with the following command: Example: impdp scott/tiger DIRECTORY=dmpdir DUMPFILE=scott.dmp You can control how Import runs by entering the 'impdp' command followed by various parameters.

ORACLE-BASE - Oracle Data Pump (expdp, impdp) in Oracle ...

Most Data Pump export and import operations occur on the Oracle database server. i.e. all the dump files are created in the server even if you run the Data Pump utility from client machine. This results in increased performance because data is not transferred through network. You can Stop and Re-Start export and import jobs.

Using Oracle DATA PUMP Utility

Oracle Data Pump is made up of three distinct parts: The command-line clients, expdp and impdp. The DBMS_DATAPUMP PL/SQL package (also known as the Data Pump API) The DBMS_METADATA PL/SQL package (also known as the Metadata API) The Data Pump clients, expdp and impdp, invoke the Data Pump Export utility and Data Pump Import utility, respectively. They provide a user interface that closely resembles the original export (exp) and import (imp) utilities.

Overview of Oracle Data Pump

Start the Oracle Data Pump Export utility by using the expdp command. The characteristics of the Oracle Data Pump export operation are determined by the Export parameters that you specify. You can specify these parameters either on the command line, or in a parameter file.

Oracle Data Pump Export

A database management system (DBMS) stores, manages and retrieves a large amount of data in a multi-user environment so that many users can access the same data concurrently. Oracle Database is a robust object relational database that provides efficient and effective solutions for database users such as delivering high performance, protecting ...
