Our controllable pitch propellers are renowned for their high efficiency and blade bearing arrangement designed to avoid peak pressures and cavitation. A wide range of hub sizes is available for powers from around 500kW up to 75MW for both four and five bladed propellers.

Controllable pitch propeller - Kongsberg Maritime

A controllable pitch propeller is often the optimal choice for installations with a shaft generator operating at constant rotational speed. Full propulsion power is available in both heavy and light conditions through an automatic pitch adjustment. Engine overload is avoided regardless of the conditions.

Unlike the fixed-pitch propeller, the controllable pitch propeller is an integrated part of the propulsion system. This makes it possible that power and necessary propulsive forces can all be controlled by simply changing the positions of the blades. The position of the blades can be changed manually without loss of propulsive force.
