Primary factor limiting productivity in aquatic ecosystems is. Light. What is crucial to determining the zone of primary productivity in aquatic ecosystems?

Ecology: Chapter 21 Flashcards | Quizlet

Aquatic ecosystems are any water-based environment in which plants and animals interact with the chemical and physical features of the aquatic environment. Aquatic ecosystems are generally divided into two types --the marine ecosystem and the freshwater ecosystem. The largest water ecosystem is the marine ecosystem, covering over 70 percent of the earth's surface. Oceans, estuaries, coral reefs and coastal ecosystems are the various kinds of marine ecosystems.
